

Roadmap Stream	POS
Product	OrderAway
Release Date	01/10/2020
Roadmap Reference(s)	8 – OrderAway Dynamic Menu
Description	Feature enabling different menus to be applied at different times of the day for the OrderAway product. This supports scenarios such as different breakfast, lunch & dinner menus at the same venue, weekend versus weekday menus or the removal of menu items (e.g. food) as closing time approaches.

Feature Details

OrderAway configuration involves recording the 'top level' menu ID (screen ID / keyboard layout) of the menu hierarchy to be displayed in OrderAway. The Dynamic Menu feature allows different 'top level' IDs to be displayed at different times of the day.

Important notes:

1. Users of OrderAway will not see menu's refresh automatically at cutover times, but rather on the next refresh the page of their device. Navigating back to the starting menu is considered a refresh event.
2. Users will be prevented from submitting an order if a time period is crossed.
3. Dynamic menus are not currently compatible with the future dated orders feature (i.e. a future dated order will be based on the current menu as at the time of order).

Setup & Configuration

Dynamic menus are configured by the MSL Professional Services team upon request.
