

<b>Roadmap Stream</b>	POS
<b>Product</b>	OrderAway for SwiftPOS
<b>Release Date</b>	26/08/2021
<b>Roadmap Reference(s)</b>	42 – OrderAway Image Management
<b>Description</b>	OrderAway image content can now be drawn directly from linked product images stored in SwiftPOS Back Office.

## Feature Details

SwiftPOS Back Office has long offered the capability to link product images to products for use in front of house terminal-based applications. The initial releases of OrderAway required images to be uploaded and maintained separately. OrderAway has been updated to use the images already stored in SwiftPOS Back Office when available, with the option to overwrite these on a case by case basis if separate OrderAway imagery is required.

Where images have not previously have been used in SwiftPOS and OrderAway is being implemented, it is recommended that images for the application are uploaded into Back Office so they can be used across all front of house applications.

OrderAway configuration in SwiftPOS Back Office requires SwiftPOS Version 10.20 or above.

## Setup & Configuration

The setup and configuration of OrderAway is managed via the Administration > OrderAway tab in SwiftPOS Back Office. The settings have been comprehensively documented in the SwiftPOS Help File.
